

JUMBO XXL

System J-XXL - Aluminium frame for ceiling

The Jumbo-XXL access panel is produced, according to the size, with one or more doors. In the case of multiple doors, these are supported by a removable central support.

Between the frame and the door, there is a 1.75 mm gap, equipped with a profiled gasket that prevents the visibility of light effects between the frame and the door. The invisible snap closures open the inspection hatch with a simple press.

The outer frame is a tubular aluminum frame, equipped with strong hinges that allow an easy opening.

The access panel is supplied with multiple safety cables with carabiners, to be reattached after each opening to prevent accidents.

APPLICATION POSSIBILITIES

- Plasterboard ceiling thickness between 10 and 25 mm
- Solid brickness ceiling
